Programme for today

11:20	<p>Developing creative approaches to address controversial sustainability issues: Group discussions</p> <ul style="list-style-type: none">- What inspiration do you draw from these shared approaches, and other approaches based on your own experience?- What are the challenges and opportunities in using creative teaching and learning approaches to address controversial sustainability issues? <p>Feedback</p>
11:45	<p>Keynote Speaker: Lewis Hou, Director, Science Ceilidh</p> <p>‘Exploring sustainability through transdisciplinary creative teaching and community-led research’</p> <p>Lewis’ speech will be followed by a Q&A</p>
12:15	<p>Summary and looking ahead</p> <p>Rehema White, Chair, LfS Scotland</p>
12:30	<p>Close and farewell</p>

Theme: Developing creative approaches to address controversial sustainability issues

The world's **RICHEST 1%** have more than twice as much wealth as **6.9 BILLION PEOPLE**.

Theme: Developing creative approaches to address controversial sustainability issues

Creativity includes novelty and usefulness
Teaching *with* and teaching *for* creativity

Who are we?

Learning for Sustainability (LfS) Scotland is a UN University- recognised Regional Centre of Expertise (RCE) in Education for Sustainable Development

We are an open network in which members and partners come together to undertake collaborative projects, research and advocacy that advance and embed Learning for Sustainability practice and policy in Scotland.

What we do

1. We **weave connections across sectors** within Scotland and with our international partners
2. We **co-produce, pioneer and practise new knowledge** and approaches and **curate materials and resources** with and for educators, organisations and communities
3. We **advocate and provide strategic advice** for effective learning for sustainability policy
4. We **lead, monitor and evaluate projects** and programmes locally and internationally, often in partnership

How we do it

- Membership – 1,212 subscribers, 1,034 members
- Steering Group – 8 members (elected in 2023)
- Secretariat – changes in personnel
- Action Groups 2024
- Projects and events
- Policy support
- Partners

See our 2024 Annual Report at:

About me and Design Work

Carol Kaye GAB Archive, Getty Images,
<https://www.vulture.com/2016/04/carol-kaye-sets-record-straight.html> , Fair Use

- Started in systems and print media
- Live in the West Highlands of Scotland
- Design Strategy Design Innovation running Public Sector Programmes (e.g. Needs Led Innovation for Research Ireland)
- Circa 20 years in design including designing online learning (HE, Public, Third and Private)
- Focus mainly on “how experts know” and folding “publics” [and their needs] into the design process
- Ghost helps organisations a designer is a facilitator of others

Back to Basics

Design Work is Speculative Work

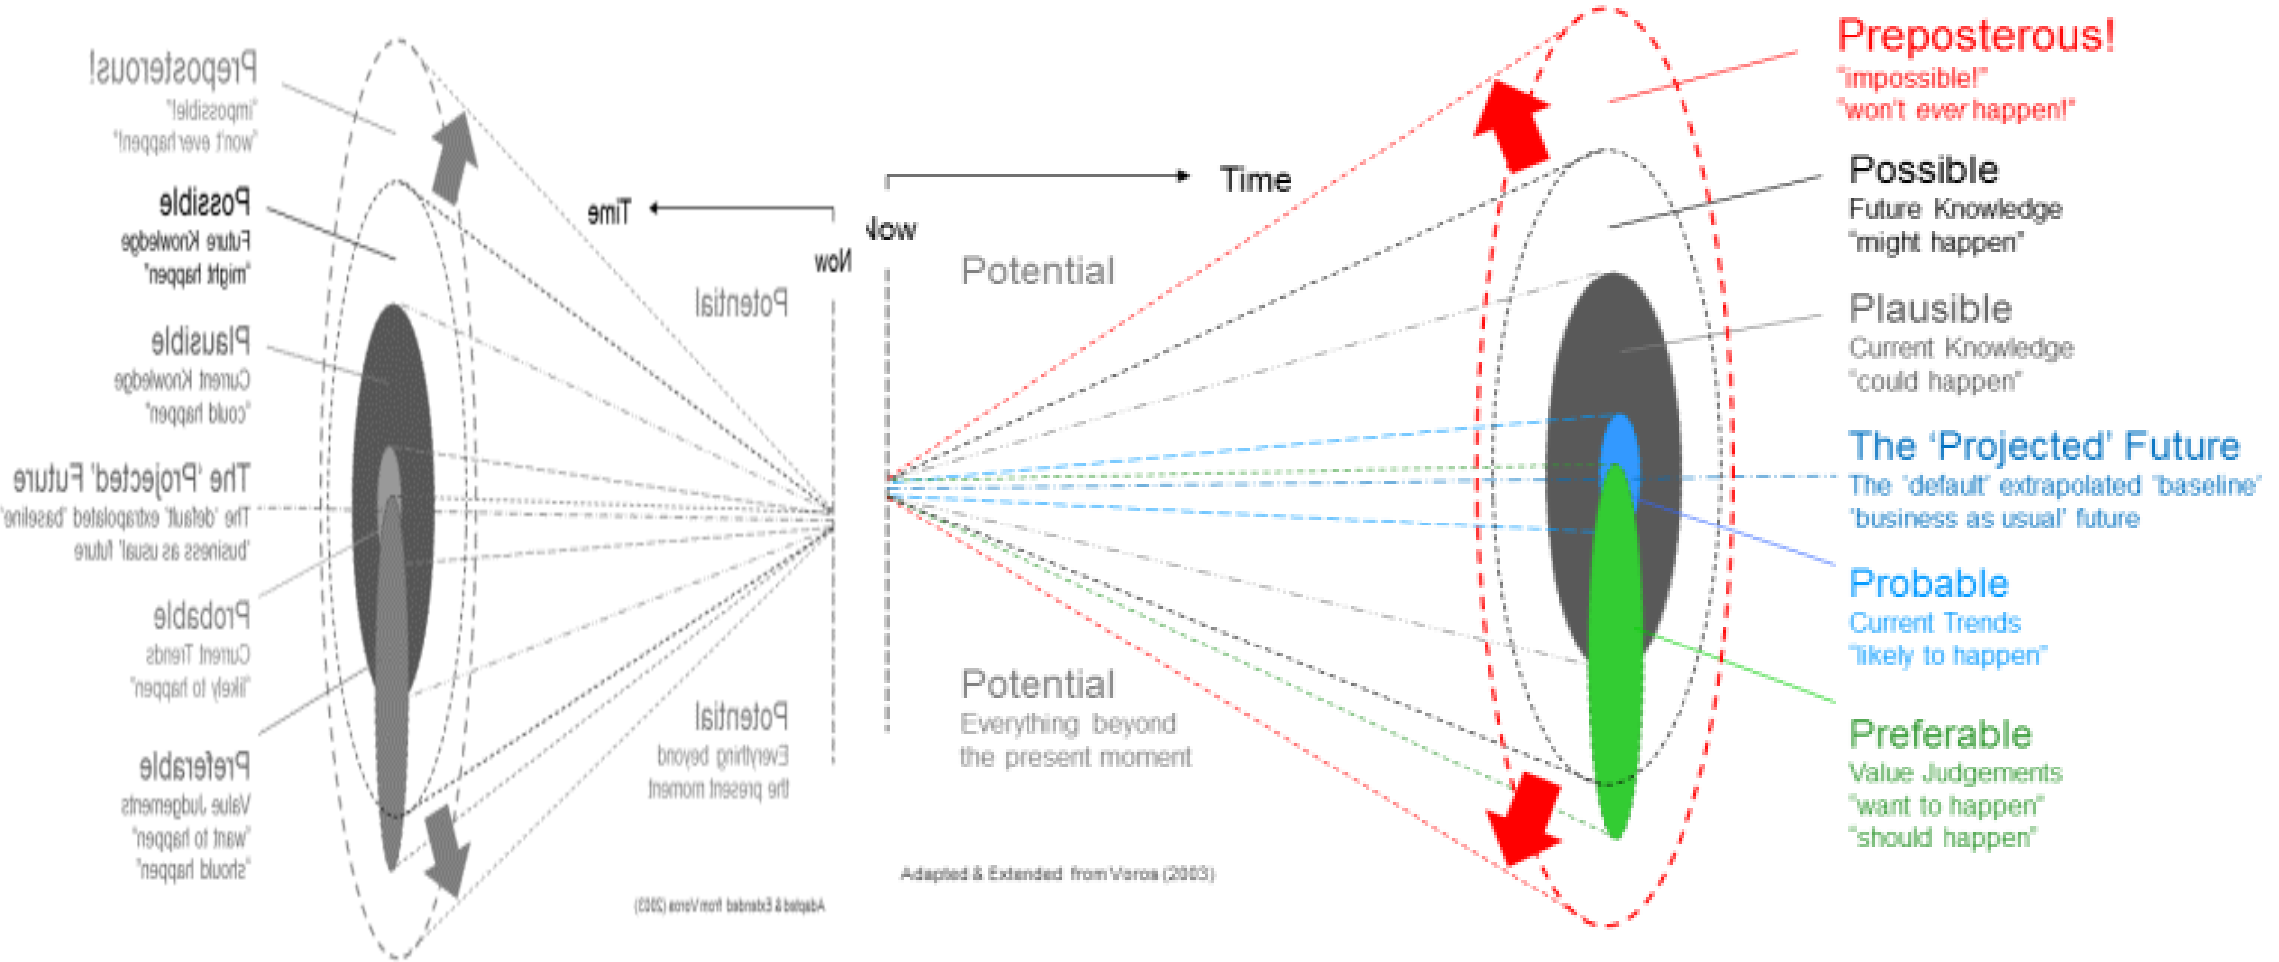

Start with Needs

- What is the **problem**
- You need to include all affected **-population**
- You need to start at the end - with the **outcome**

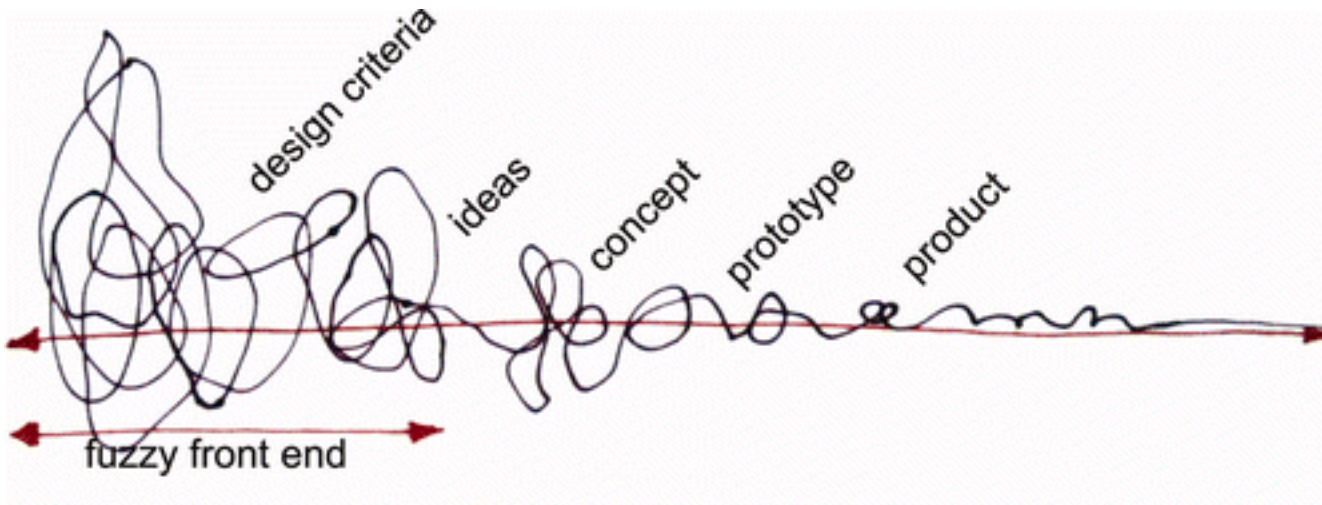

The Outcome is hard, so accept the uncertainty

- throwing yourself into an imagined future;
- using those imagined futures to make decisions in the present.

What if ... likelihood

Evidence-Based Needs and Design Innovation

Start with the future you want to create. Start with needs

- You gather to define **problems, populations, and outcomes.**
- However, as you define one you change the others, they circle each other, you loop back.
- As you seek to create something new you need to listen, and fold “publics” into the design process but also lead

PIVOT

“what if”

Speculations are not predictions

- Speculation about a future set of events, however implausible, good or bad can shape our actions in the present
- Our Speculations about the future are conditioned by the present and indeed our past
- We can make them happen

Piccadilly Circus Water Lillies, 2010, R Graves and D Madoc-Jones, <http://www.london-futures.com/2010/08/10/piccadilly-circus-water-lilies-fish-and-wind-turbines/> Fair Use

Dilemmas for Learning Design

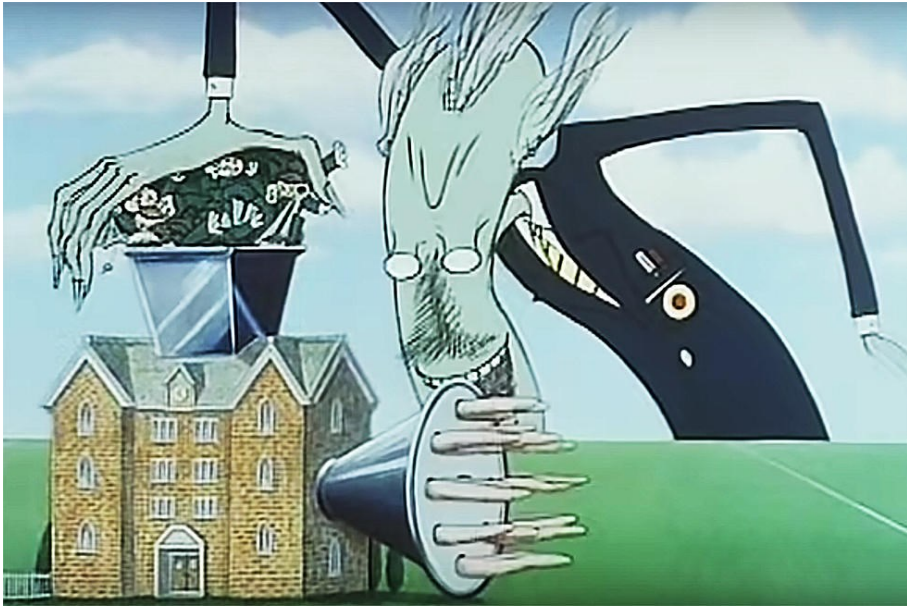

Image not attributed, undated, "Another brick in the wall", <https://ultimateclassicrock.com/pink-floyd-another-brick-in-the-wall-part-ii/> Fair Use

- Curriculum is control, carefully structured measured and scrutinised (Apple 1995), how to make it **needs led**;
- Who is affected and how to explore and develop in a participatory way at pace under "public" scrutiny;
- How to develop a shared sense of an ideal **outcome** and for whom [glibly is it the learner, the provider, the planet]
- Getting the balance between listening and leading

Getting Started with Learning Design

Start at the End

What is it a learner will be able to know/do/act at the end that they could not do at the start (speculative and critical design, e.g. Malpass 2013; Sanders and Stapper 2014, Bjorgvinsson et al. 2012)

Lots of questions arise from this:

- What will they need or want to do to get there (critical pedagogies, see Apple 1995 and critical perspective on activity theory see Nicolini 2012;
- What is it that YOU expect them to do at the end and along the way (strengths approach to pedagogy, see Brown 2013; Bensuade-Vincent 2009)
- How will the learner or you know they are on the right path and know when they can now do it, emphasising participatory approaches (Kemmis 2006; Sanders and Stapper 2008; 2014.

Text Added, Image not attributed, 2015, "I wouldn't start from here",
<https://politicsatsurrey.ideasononeurope.eu/2015/04/02/wouldnt-start-eus-next-steps/> Fair Use

Sensitising Concepts

- Affective labour is the labour that goes into affecting emotions (Hardt 1999). We need to recognise the affective labour of change.
- Learning is about change, and creating affective atmospheres is essential for effective change.
- It is hard, [NOTE to self, especially in ESD] , and we need to take care. Care is intra/inter actor (including non-human actants) and structured.

Pérez de Rozas (1970) Restoration of the Picasso work **Science and Charity** the Palau Nacional. Barcelona,
<https://www.blogmuseupicassobcn.org/2020/03/luxury-protection-for-science-and-charity/?lang=en>. Fair Use

We all walk uncertainly in the learners footprints

Just like needs-led innovation, learning design means anticipating (see Cross 2006)

Accept that while we have assumptions, we don't have shared assumptions about the **problems**, who is affected [**population**] and the **outcomes**.

+

To know how the learner will get to the end, we need to work together to "anticipate" all the "legs up", "short cuts", slips, trips, falls, joy and pains you need to get to know the learner and care for them.

Kerry McInnes

UHI Moray

Under the Scissors

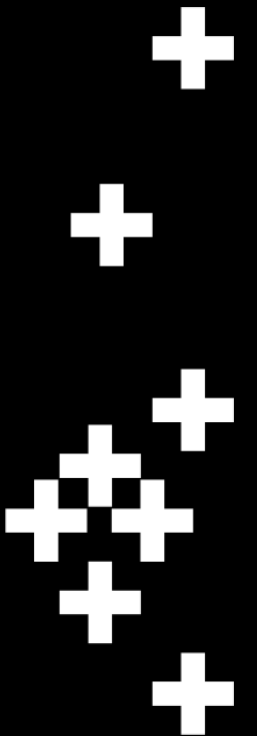

A student-led climate conversation project

Learning for Sustainability Scotland

AGM 9th January 2025

Dr Kerry J McInnes

Just Transition Research Fellow

Context and Aims

- + Collaboration between UHI Moray and SAMS**
- + Funded by the Scottish Government's Climate Engagement Fund**
- + Pilot project with three primary goals:**
 - 1. To empower students to initiate and lead climate conversations.**
 - 2. To increase public understanding of local climate issues.**
 - 3. To inspire tangible positive changes in behaviour to mitigate climate change impacts.**

The Under the Scissors Project

- + Inspired by “a brush with climate” an initiative by Paloma hair salon in Sydney**
- + Several studies using a salon or barbershop environment to convey messaging on various issues, primarily health and wellbeing.**
- + Prof Denise Baden at Southampton University specifically studies sustainability messaging via hairdressers.**

What is a Climate Conversation?

- + A climate conversation is a peer-to-peer chat about our changing world. There are no experts involved: it is a friendly discussion about the impacts of climate change and possible solutions.**
- + It can be difficult to have a conversation about climate change.**
- + Many people find it a big, confusing or anxiety-causing topic.**
- + However, just one climate conversation can help people feel less alone and feel more knowledgeable and hopeful about the future.**

The “Trusted Messenger” Model

- + At the heart of "Under the Scissors" is the “trusted messenger” model.
- + Many of our students work in public-facing industries such as hairdressing, beauty, and hospitality.
- + These professions naturally foster connections, creating a space for open dialogue.
- + Our innovation was to equip students with the knowledge and confidence to integrate climate discussions into these interactions.

What did we do?

- + 2 interdisciplinary workshops.
- + Student-led two-way learning of climate change information and communicating in public facing environments.
- + Designed flashcards explaining in simple terms what is happening around Scotland because of climate change.
- + Keeping things local helps people relate more easily to how climate change might be affecting their everyday lives.
- + Evaluation of the project

Climate Conversations

- + Hair and Beauty students had climate conversations with their clients using the flashcards as conversation starters.
- + Clients then returned for a second appointment in 6 – 8 weeks.
- + Client's knowledge was tested pre- and post-appointment via a questionnaire.
- + Measurement of wider impact via assessing any direct action or multiplier effect.

The results spoke for themselves

Before the climate conversations:

- + 58% of clients said action against climate change was "important"
- + On average, the clients reported an "average" understanding about climate change
- + 33% of clients mentioned a personal interest in local news stories about climate change
- + The majority of clients described "climate change" as changes to weather, seasons, and temperatures. Only 16% of clients mentioned the links to human activity

After the climate conversations:

- + 100% of clients said action against climate change was "important"
- + On average, the clients reported a "good" understanding about climate change
- + 66% of clients mentioned a personal interest in local news stories about climate change.
- + 100% of clients agreed the salon was an appropriate place for a climate conversation
- + Clients mentioned speaking to at least 14 people about the climate conversations they'd had, as well as an unspecified amount of family members, work colleagues, neighbours, and friends

**The flash cards are
good to learn new
facts**

**I spoke about
the project to
my new
neighbours**

**I have started taking the
bus and walking more**

**I learned about ways I can
help with climate change**

**I have paid
more attention
to climate
change stories
in the news**

Coclusions & Why this Project Matters

- + Climate conversations don't have to happen in lecture halls or conferences; they can occur over a haircut, a manicure, or a casual chat in a shop.**
- + By tapping into everyday interactions, we can make climate action personal, approachable, and impactful.**
- + Moreover, this project prioritises inclusivity. It gives a platform to voices often underrepresented in climate discussions, particularly young people and those in vocational roles.**

What's Next?

- + Lots of buzz about project locally and nationally!
- + Partnering with Wella to disseminate the project further.
- + A plan for roll-out across other Hair and Beauty departments in the UHI partnership as well as to other public-facing students e.g. sport and fitness, hospitality.
- + Paper submitted to the Journal of Environmental Education
- + More funding!

Thank you!

Thank you!

How do we value different perspectives and knowledge to enable more sustainable futures?

Highlands & Islands Community Climate Change Grants

- Focused on changing how knowledge is valued, and whose voices are amplified
- Funding went directly to communities in the Highlands & Islands to explore a climate change issue through research, leading an equitable partnership with a researcher
- Specific focus on bringing and building capacity of “New Voices”
 - including those explicitly those who are new to climate action and funding - and taking an intersectional approach around race, socio-economic class and marginalised languages.

Highlands & Islands Community Climate Change Grants

Reusable cup trial set to deliver environmental boost in Helensburgh

Published: 13 Apr 2023

Share: [f](#) [t](#) [in](#)

Buying a cup of coffee is an everyday routine but how much environmental damage does it cause?

It's a question few will ask as they hand over their money but a new community-led research project, supported by academics from Heriot-Watt University and the University of York, aims to challenge this.

Key Learning

- The vital importance of place-based local knowledge in research
- Acknowledging that a process driven, co-productive and a reflective approach is challenging – especially in the current climate.
- However, it's critical to have time, support and time to build trust, connections and capacity to enable collective social dreaming
- There is always a need to reflect on power constantly
- Reflect on the language used and framing. Who is this for? What assumptions & norms does this uphold?
- Shared values and working relationally are critically important for partnership
- Need for time and space for scaling this work and bringing policy partners on board

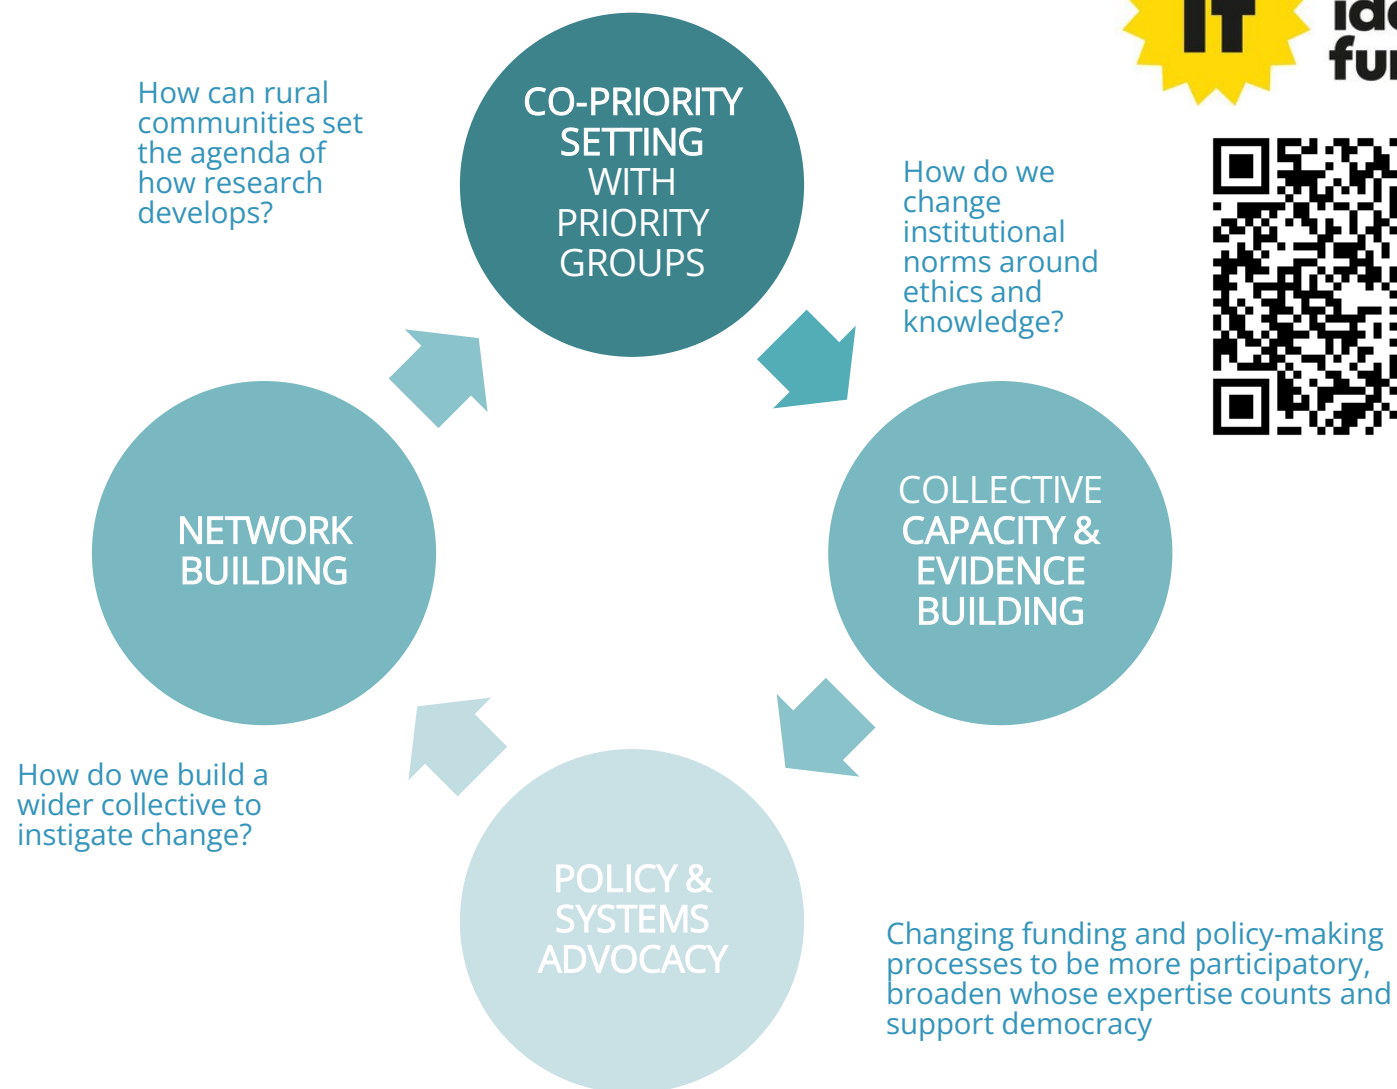

How can we scale this impact and work on a systems level to enable sustainability?

What (infra) structures needs to change to enable wider impact?

A HIGHLANDS & ISLANDS NETWORK FOR COMMUNITY-LED RESEARCH

Thank You/Mòran Taing

How can we meaningfully broaden who is involved in conversations about sustainability? How do we value different perspectives and knowledges? And how do we scale to develop wider structures to enable more sustainability on a systems-level?

Any Reflections & Questions?
